

USER MANUAL v1.0 (02 August 2023)

INTRODUCTION • PROJECT STRUCTURE • HOW TO USE

THE ASSETS PROVIDED ARE INTENDED SOLELY FOR PERSONAL AND COMMERCIAL USE IN THE CONTEXT OF TRADITIONAL SOFTWARE APPLICATIONS, GAMES, AND MULTIMEDIA PROJECTS. HOWEVER, THESE MODELS AND/OR TEXTURES ARE STRICTLY PROHIBITED FROM BEING USED IN ANY FORM OF AI PROJECTS, MACHINE LEARNING, OR ANY OTHER AUTOMATED OR DATA-DRIVEN APPLICATIONS. VIOLATION OF THIS RESTRICTION MAY RESULT IN LEGAL CONSEQUENCES. THANK YOU FOR RESPECTING THESE TERMS AND ENSURING THE APPROPRIATE USE OF OUR ASSETS.

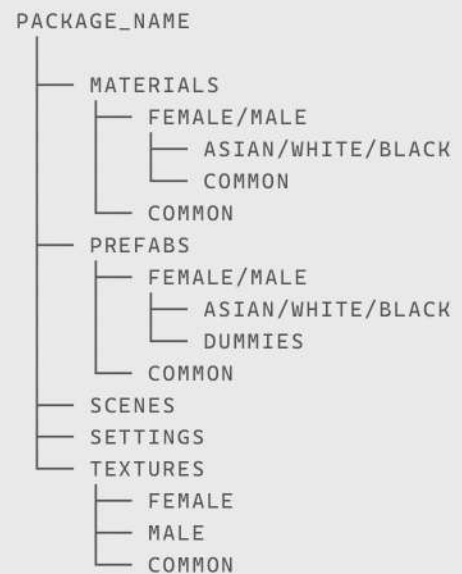

Hello, dear developer! Thank you for purchasing this asset. Please read this manual carefully to understand how to smoothly integrate this asset into your projects.

This project was built relying on Unity® Starter Assets utilizing its character controller, input system and animations. Represented characters have their own Avatars for male and female versions. Please use them accordingly. Character Dummies are technical placeholders for future customisation assets. For all female assets you should use:

MESH_F_DUMMY_REGULARAvatar

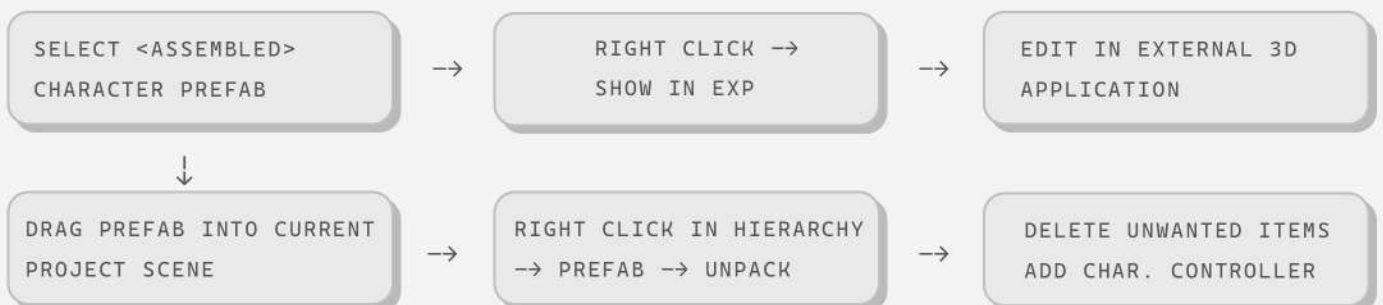

And for the male assets, your Avatar in Rig seating should be this:

MESH_M_DUMMY_REGULARAvatar

In the <PACKAGE_NAME> folder, you will find all the assets you need. The next page of this guide will provide a proper explanation of the file naming conventions, allowing you to easily read and identify each asset based on its features.

To make use of this asset, you can follow these instructions:

Single separated body parts are provided as well in case you need more precised editing. To edit textures double click on the image file, found in <TEXTURES> folder.

FILE NAMING CONVENTION • FILE TYPES

The naming pattern for the asset pack files and folders is designed to be user-friendly and intuitive. Each file follows the format:

`<ASSET-TYPE>_<GENDER>_<BODY-PART>_<ETHNICITY>_<BODY-TYPE>`

The `<ASSET-TYPE>` represents the specific type of asset available, such as materials, textures, material instances, or meshes. When it comes to `<GENDER>`, you have two options: male or female. The `<BODY-PART>` indicates the specific body part or feature the asset focuses on, including head, torso, hands, legs, feet, hair, and head accessories. The `<ETHNICITY>` offers choices like Black, White, and Asian. Lastly, the `<BODY-TYPE>` represents different physical builds, including regular, bulk, or large. This user-friendly naming pattern allows you to easily find and select the perfect assets for your project.

NAMING-SYSTEM

Scheme above explains all the possible naming conventions you can find in the project. For a better clarity let's translate following example:

`TEX_F_HANDS_01_A_B_RMES`

This stands for `<Texture><Female>_<Hands-slot>_<Variation-01>_<Asian-ethnicity>_<Bulk-body-type>_<RMES-mask-texture>`.

MODULAR SETUP • EXPANDING ASSET LIBRARY

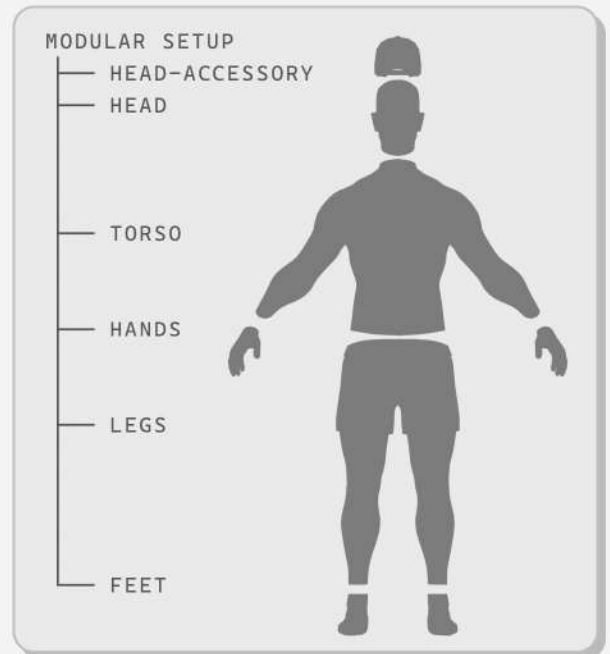

This project uses modular approach to create desired character which is divided in five main compatible parts: Head, Torso, Legs, Hands, Feet. Additional slots like head accessory/facial hair are also represented and may be expanded to bag slots, weapons, etc.

THIS MODULAR SETUP DOES NOT SUPPORT COMPATIBILITY WITH PREVIOUSLY RELEASED ASSETS (PRE-2023). ALTHOUGH IT'S EXPECTED FOR THOSE ASSETS TO RECEIVE A COMPATIBILITY UPDATE LATER.

On the right, you can observe the basic modular setup. All forthcoming packs will be compatible with this setup on a vertex-to-vertex basis. There is a possibility of additional slots being added. Optional slots, such as the Head Accessory, can be utilized multiple times on the same character (e.g., having a beard, sunglasses, and a hat simultaneously).

Each modular part possesses a unique numerical index that enables differentiation between different packs. For instance, the number '00' corresponds to the naked body part, while '01' and '02' denote base suits.

Be sure to check our Discord server (details on the next sheet) to check out work-in-progress packs.

PRODUCT SUPPORT • DISCORD COMMUNITY

If you run into issues using this pack, you should contact me in either of the two methods:

[https:// discord.gg/mcqsmGuWHA](https://discord.gg/mcqsmGuWHA)

support@rocketarts.studio

To enhance the quality of support and minimize wait times, I recommend using my Discord server as a communication channel. Below, you will find a guide on how to join, verify, and submit a **support ticket** through our server. Our friendly community, which includes developers from different engines, can also provide valuable assistance.

Here's a small guide on receiving support in the fastest possible way:

Join Discord server using provided link or QR code in top left corner. Verify yourself as a human.

IMPORTANT: in the #welcome channel set yourself a role defining your engine of choice by pressing corresponding reaction to Role Bot post.

Go to #support-tickets channel and press <CREATE TICKET> button. A new chat will start in the left. I will see your request on my phone and get back to you asap!

Describe your issue preferably using reference form below. I'm doing my best to answer quickly, but depending on your time zone it may take up to 6-10 hours.

Experiencing a problem can be frustrating. To expedite the support process and prevent the need to repeat questions multiple times, I have provided an example of what to include in your support ticket or email:

Hello there! I recently acquired the <PROVIDE ASSET NAME> pack for <PROVIDE YOUR ENGINE OF CHOICE AND VERSION>. I'm encountering an issue and would appreciate your assistance. Here's a brief description of the problem: <BRIEFLY DESCRIBE YOUR PROBLEM>. Additionally, I have attached three screenshots of the scene and the occurring bug for reference.<PROVIDE AT LEAST 3 IMAGES OF YOUR SCENE AND APPEARING BUG>. (having selected your role on server helps to quickly identify your engine of choice)

That's it! In any way, please join our server. It helps me to collect valuable feedback, ask users what next outfit should I make and what could be improved. Also I announce sales on different marketplace platforms.
